

Performance Engine Technician Entry Level

Organization Description:

Mazworx Manufacturing is a local business based in Orlando, FL. Mazworx has been on the cutting edge of performance, product research and development, and fabrication. We have dedicated our expertise over the years from racing and product development to create the best performance parts on the market. Although we are known for our world's most powerful Nissan SR20 power plants, our performance product knowledge does not end there. Our capabilities are broad from building full chassis race cars, CNC machine product development, full engine building capabilities, and custom fabrication product development.

Position Summary:

We are currently looking for an Entry Level Performance Engine Technician. This position consists of disassembling, handling and prepping engines for machining and assembly. Such as initial breakdown, cleaning, and organizing customer engines. We will train you on the hot tank, sand blaster and other machines/tools needed to do this job. If you have the drive to learn performance engine building, then this is entry level position you were looking for.

Requirements:

- Basic understanding of engines.
- Need your own basic hand tools.
- Able to lift engine blocks safely.
- Highly organized and flexible in a dynamic environment
- Commitment to Mazworx mission and values

Responsibilities:

- Operate safely a hot tank and blast cabinet.
- Breaking down engines as they come in.
- Coordinate with machine shop on jobs
- Ensure your safety in the shop
- Finish jobs in a timely manner

Salary and Benefits:

\$18/hr starting. Paid vacation, sick, and health benefits included after 90 days.
